

Unified Security and Compliance Across Ansible and Terraform

Steampunk Spotter is a powerful platform that keeps every Ansible Playbook and Terraform configuration secure, compliant and audit-ready – whether your teams run one or both.

SHARED CAPABILITIES ACROSS YOUR AUTOMATION STACK

Script Scanning

Automatically scan every Ansible Playbook and Terraform configuration for security risks, misconfigurations, and quality issues before they reach production.

Supply Chain Management

Proactively control which collections, modules, roles, and dependencies are allowed in your automation.

Custom Policies

Enforce your own security rules across every playbook and Terraform configuration before execution.

Ansible teams get an extra layer of depth – CIS/STIG validation, AI-generated compliance policies, and SBOM/CVE reporting – with Terraform capabilities catching up fast.

WHY SECURITY TEAMS CHOOSE SPOTTER

- Reduce automation risk before execution
- Apply consistent security guardrails across every Ansible Playbook and Terraform configuration
- Pass audits with confidence – compliance evidence is ready whenever you need it
- Maintain centralized governance across your Ansible and Terraform automation

ONE PLATFORM FOR TRUSTABLE AUTOMATION

Security teams gain continuous visibility and policy enforcement across both **Ansible and Terraform**, while platform and automation teams use the same platform for upgrades and migrations, standardization, and safer AAP workflows.

Deploy Spotter your way — SaaS or fully on-prem, including air-gapped environments. Secrets are automatically nulled out, giving you **complete control over your data**. Spotter is **ISO/IEC 27001:2022 certified and CIS compliant**.

PROVEN AT ENTERPRISE SCALE

Highly regulated enterprise eliminated high-risk issues across its Ansible estate, embedding continuous compliance and expanding automation coverage.
